EasyMile launches new EZ10 driverless shuttle featuring innovative safety architecture and enhanced passenger experience

- First shuttle worldwide ready for operations without on-board attendant
- Enabling transport operators to fully unlock the potential of last mile mobility.

Toulouse, 10 June 2019 - EasyMile announces the launch of its new EZ10 electric driverless shuttle, the first such vehicle worldwide ready for operations without an on-board attendant. It will be showcased for the first time on the EasyMile booth (B3070) at the Global Public Transport Summit 2019 in Stockholm, Sweden on Monday 10 June 2019.

- **Equipped with a brand new safety architecture to allow operation without a on-board attendant**
- **Redesigned and optimised sensor set to provide even wider vision**
- **Enhanced passenger experience with new cushioned seats, seat belts and ADA (Americans with Disabilities Act) compliant wheelchair anchor points for better comfort and safety**

First launched in April 2015, the EZ10 complements existing transport services and provides an innovative, flexible and inclusive solution to the First Mile and Last Mile challenges. This latest generation of the EZ10 enables transport operators to fully unlock the potential of last mile mobility in low-density areas or on large private sites - such as factories or airports - where cars tend to dominate the choice of transport and the cost of providing transport is high. Shared autonomous transportation can easily be adapted to users' needs, offering the very much required operational flexibility to operators, including adapting service frequency to meet demand.

Running on EasyMile's robust autonomous technology, the EZ10 shuttle can carry up to 15 people. It is easily accessible to people with reduced mobility thanks to the automated inbuilt ramp and ADA (Americans with Disabilities Act) compliant wheelchair anchor points. The EZ10 is fully electric and contributes to both improving air quality and reducing noise pollution.

The shuttle's sensor set has been redesigned and optimised for an even more accurate vision even in challenging weather conditions.

Benefiting from the latest developments in robotics and artificial intelligence, the EZ10 is today the most deployed autonomous shuttle in the world with over 230 sites across 26 countries and 600,000 km now on the counter.

While most "driverless" operations include 1 or 2 attendants on board the vehicle, EasyMile has been running for the past 8 months one of the first deployments in the world that is purely relying upon a remote supervisor. With no human back-up attendant on-board, the EZ10 is supervised from a remote control center manned by a fully trained supervisor who monitors the autonomous vehicle thanks to a real-time data stream and ensures communication with passengers. This is a major step forward to answer local mobility needs and demonstrates EasyMile's ability to deliver the full potential of autonomous travel.

"EasyMile's technology has now reached a maturity and reliability level that allows us to deploy EZ10 shuttles without an attendant on board. Right now they are mostly used in controlled environments, but as our software progresses they will be able to run in more complex environments. Passengers' feedback has been very positive on all our tests and the legislation around the world is now coming together to enable this step forward," said Gilbert Gagnaire, founder and CEO of EasyMile. He added: "This is such an important milestone both for EasyMile and for mobility in general."

EasyMile is progressively deploying fully driverless services in other campuses during 2019 and in mixed traffic during 2020, in coordination with clients, transport operators, and the relevant authorities.

PRESS RELEASE

About EasyMile :

EasyMile is a pioneer in autonomous vehicle technology and smart mobility solutions.

The fast-growing company develops software to automate transportation, revolutionizing passenger and goods transportation. It has already deployed 230 driverless projects with more than 380,000 people transported over 600,000 km. Clients include the world's largest transport operators, city authorities, airports, corporations, business parks, and universities.

EasyMile has a global presence with headquarters in Toulouse (France) and regional offices in Denver (USA), Berlin (Germany), Adelaide (Australia) and Singapore. The Company employs over 170 highly-skilled and passionate employees.
